Art Unit: 1714

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Yabuhara et al.

See col 2, lines 1-59 wherein the polymers and phosphazene components are disclosed. Patentee contemplates mixtures of polyamide imide and ABS.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yubuhara et al.

Yubuhara et al discloses that the patented compositions are used as materials for producing devices in many fields such as office automation and household electrical appliances. This is due to their excellent physical properties. It therefor is obvious to employ the patented compositions to formulate such types of devices as wiring boards, circuits, films and laminates and cover inks. Nothing of an unobvious nature is seen in these applications.

Claims 4-6 are objected to as depending upon a rejected base claim, but would be considered allowable if rewritten in independent form.
